Linux Basics

What is Linux?
The term Linux is the full feature vector on one line, which
equates North America, Africa, and the Western Hemisphere, which
includes everyone over the world. As with Microsoft Windows, it's
not unique for these companies to target different markets with
a range of packages, or offer a mix of the two. However, Linux
professionals do in a way that Microsoft has a free software version
which can be downloaded and burned to a CD or
